

A whole  
new way of  
looking at  
life safety.

FireworX

When it came to developing our new line of life safety systems, we tossed out the old assumptions about fire alarm; we listened to what *you* had to say – and we built an exciting new brand on two of your most basic needs: product support, and value for your money. Here's what we came up with...

### **Training on your terms...**

FireworX self-study courses are designed by educators with years of experience in the life safety field. They give you the skills you need to take full advantage of the innovative features that FireworX systems have to offer. Courses are accredited Continuing Education Units (CEUs) by the International Association for Continuing Education and Training (IACET) and count towards NICET certification.

### **Idea Guys who make you look good...**

Got a difficult job that needs some expert guidance? Struggling with a tricky application problem? Struggle no more. Our application specialists offer free advice on how to make the most of even the toughest installations. From panel configuration to field wiring and devices – you're just a call away from a FireworX expert dedicated to getting you on the right track.

### **Tech Support in synch with your needs...**

All our support technicians are NICET Certified life safety professionals who combined have more than 180 years experience in the field. They have their own Trouble Simulation Lab, ISO 9001: 2 Certification, and the stamina to see every issue through to a successful resolution. Oh yes, and *our* Tech Support is free. 24/7. Really.

### **A three-year warranty that speaks for itself...**

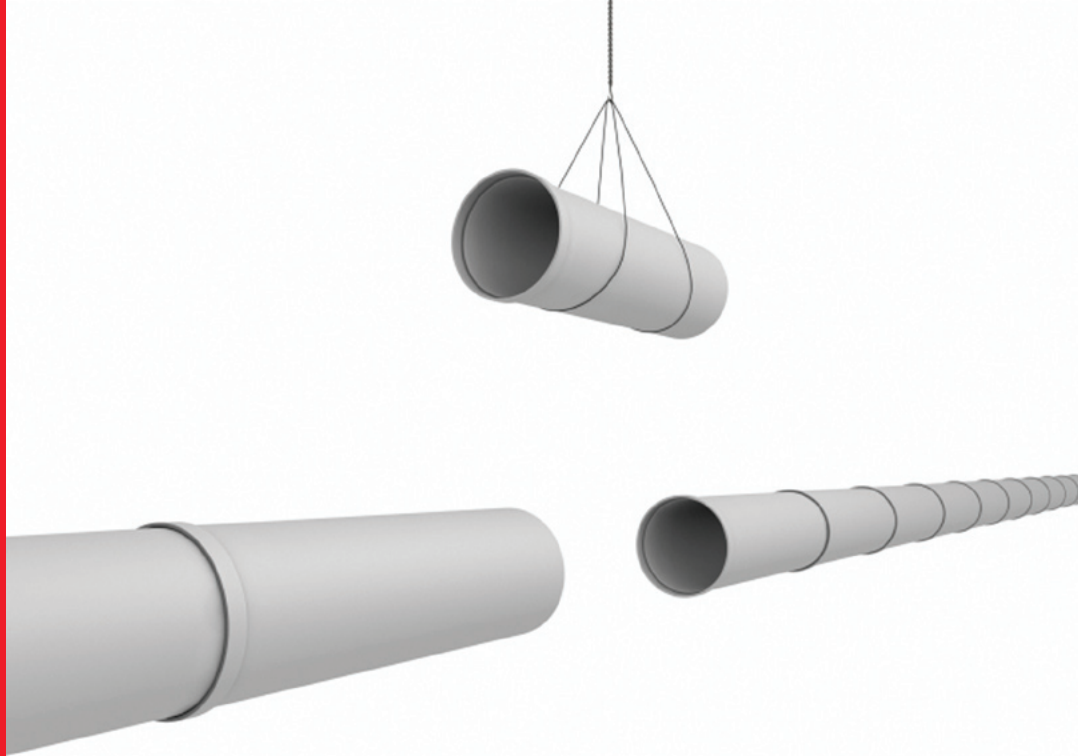

Every FireworX system you purchase is underwritten by one of the most comprehensive warranties in the business. This is your assurance that FireworX equipment will bring long-term value to every installation with quality products, innovative technology, and our unbeatable three-year pledge of uncompromising excellence.

what's  
possible.

**Greater than the sum of its parts...**

Designed from the ground up to work in concert with one another, our systems are true systems – not patchworks. In fact, GE remains one of the only life safety suppliers today that engineers and manufactures fire alarm control panels, initiating devices, *and* notification appliances.
